ALSIDENT suction arm, NW 75, antistatic

The extraction arm has been specially developed for use in aggressive areas. Tubes and joints are made of impact-resistant, conductive, chemically resistant polypropylene. The threaded rods, springs and finger screws are made of acid-resistant stainless steel.

Thanks to its self-supporting design, the extraction arm is easy to handle and can be easily repositioned.

Assembly is quick and easy. The extraction arm can be dismantled and reassembled without tools for cleaning.

The use of high-quality materials ensures a long service life and low maintenance requirements.

The extraction arm is equipped with an opening/closing control flap as standard.

Properties

Mounting type:	Tischmontage
