Spark latch for FilterCube

The spark latch is build out of a metal housing with many copper sheets inside. Due to the assambly of the sheets the airflow goes through in curves (zigzag). The sparks bounce against the sheets and expire. It's possible to install the spark latch direct to the filterunit or place it in between the suction-ducting. Maintenance is done very easily by taking off the maintenance-cap.

RAL colour: 9006

Properties

Width [mm]:	377
Depth [mm]:	284
